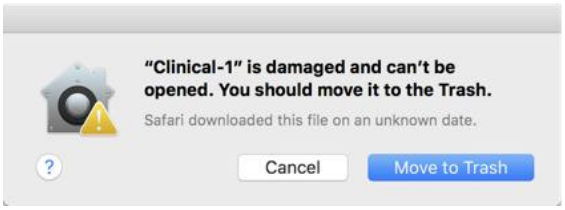
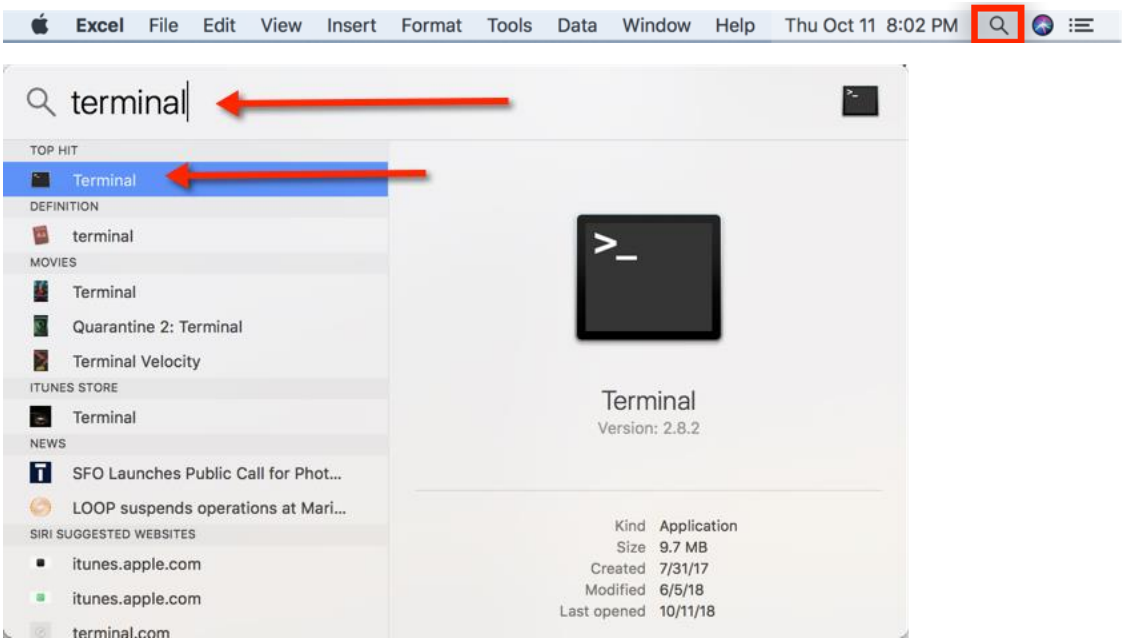
How To Solve “The file is damaged or cannot be opened. You should move it to the trash.”



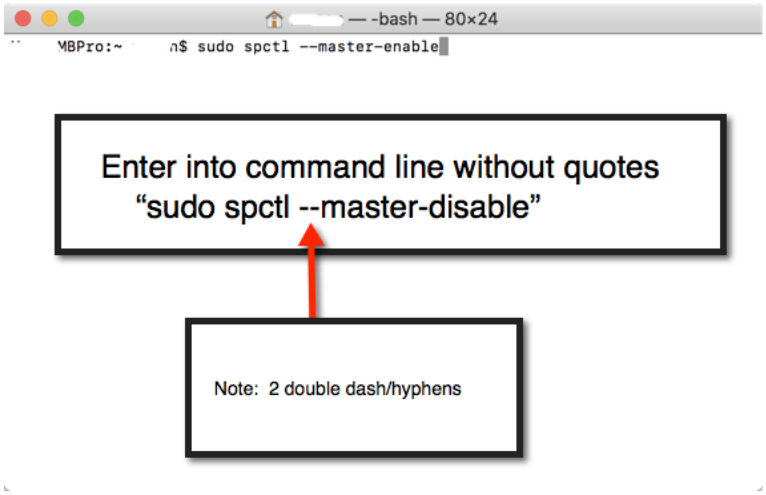
Step 1: Please close the System Preferences if it is open.

Step 2: Click the spotlight icon as shown in figure below or on the keyboard click “Command + Space Bar”. This will open up the spotlight. Type “terminal” in dialog box.



Step 3: Enter into command line without any quotes. Make sure you type exactly as shown in the below and hit enter:

sudo spctl --master-disable



Step 4: Return to application and try to open it. You will see following message. Click open.
