

Exe Files Not Opening In Windows 10

To fix the problem, follow below steps:

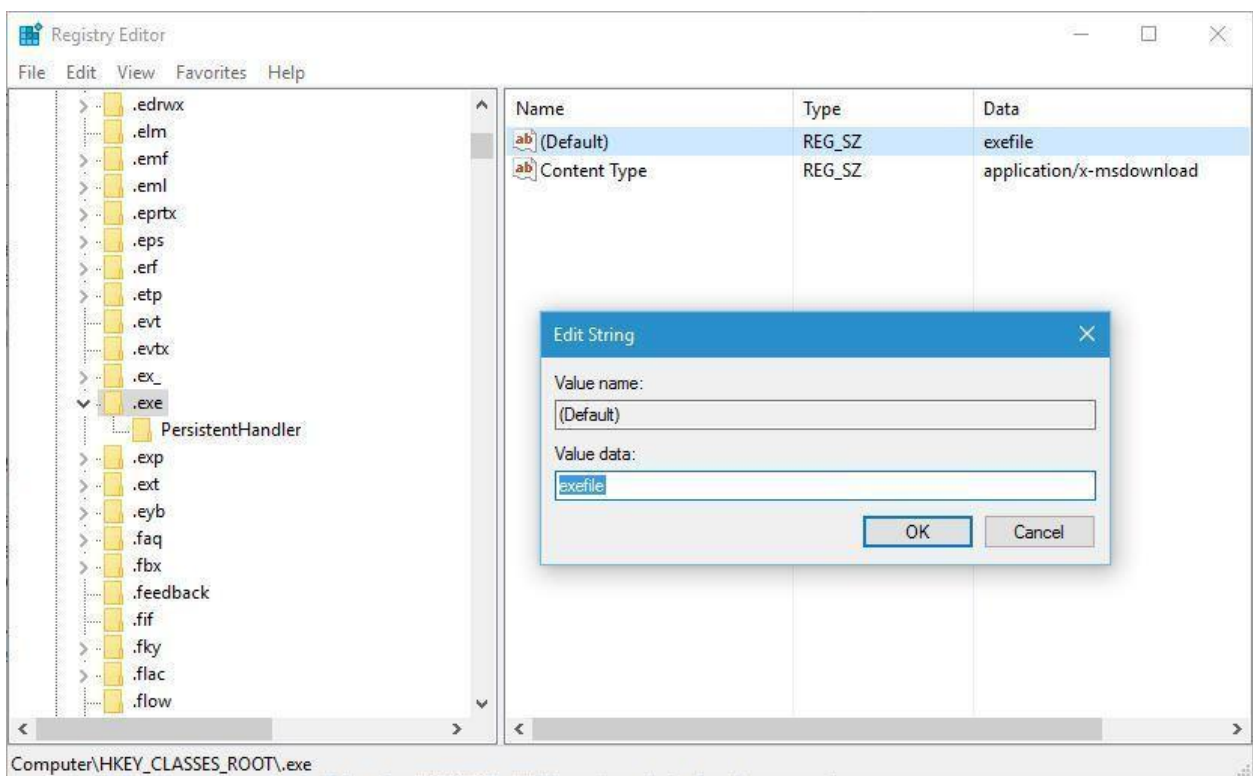

1. Press **Windows Key + X** to open Win + X menu and select **Command Prompt (Admin)** from the menu.

2. When *Command Prompt* starts, simply enter **regedit** and press **Enter**.

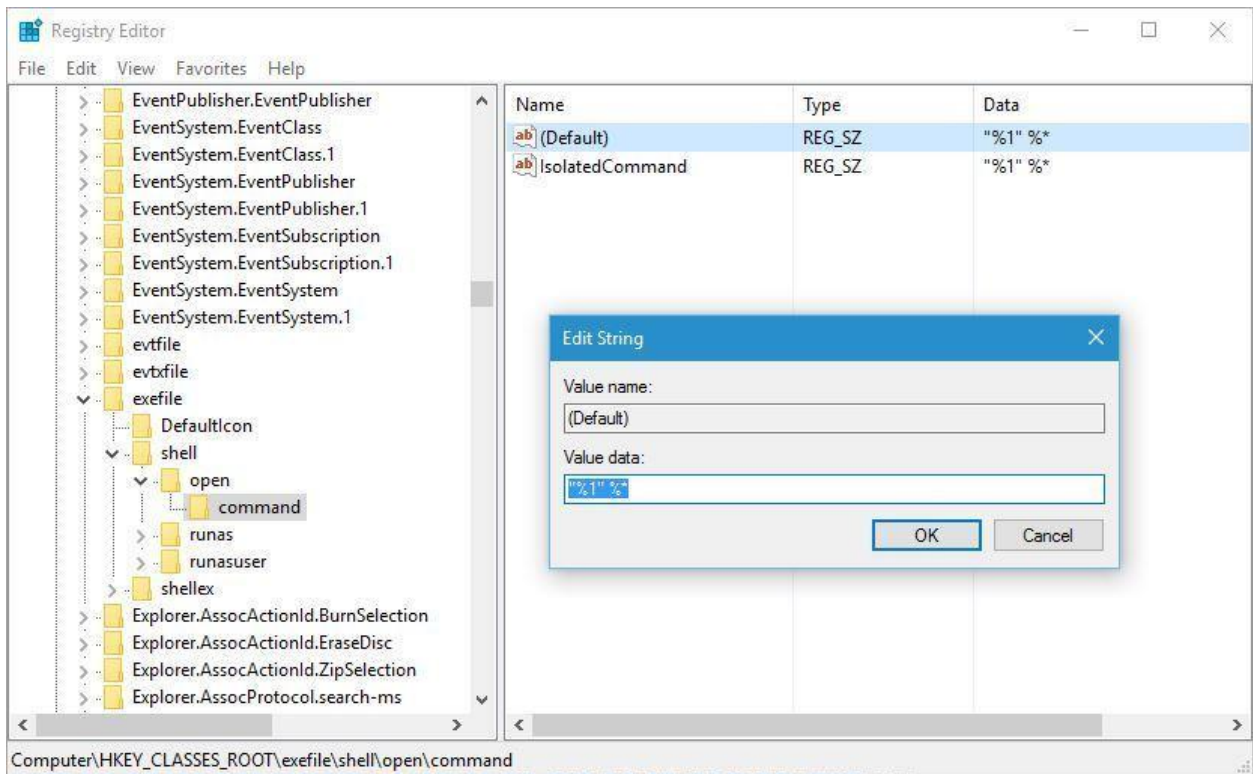

3. *Registry Editor* will now open. In the left pane go to **HKEY_CLASSES_ROOT.exe**.

4. In the right pane, double click **(Default)** key and set Data value to **exefile**.

5. Now go to the **HKEY_CLASSES_ROOT exefile/shell/open/command** key in left pane.

6. In the right pane select **(Default)**, double click it and set its Value data to **"%1" %***.

7. After doing that, restart your computer and check if the problem is resolved.
